

Dayana Alice Siles Miranda

Frontend Developer

dayana.siles.m@gmail.com | +591 69471893 | linkedin.com/in/dayana-siles-dev | Cochabamba, Bolivia

Available for full-time engagements

SUMMARY

Frontend Developer with over 6 years of experience designing and building enterprise web applications, with deep specialization in Angular. Proven track record modernizing legacy architectures, adopting Angular's latest features (Standalone Components, Signals, Control Flow), and integrating frontend applications with REST APIs and reactive data flows (RxJS, Observables). Strong background in reusable component design, state management (NgRx), CI/CD pipelines (Jenkins), containerized development workflows (Docker), and close collaboration with product and design teams, including experience as a Frontend Technical Lead mentoring junior developers. Combines solid engineering judgment with a UX-oriented mindset and professional working proficiency in English to deliver products that are fast, intuitive, and easy to maintain. Currently pursuing a Master's Degree in Software Product Development with Artificial Intelligence to expand into AI-driven engineering practices.

TECHNICAL SKILLS

Angular & Core Angular (v10–v20, 6+ yrs), TypeScript (6+ yrs), JavaScript (6+ yrs), HTML5 (6+ yrs), CSS3/SCSS (BEM) (6+ yrs), RxJS & Observables, NgRx, Angular Material, Standalone Components, Signals, Angular Control Flow, Micro-frontends

Other Frameworks React.js, Tailwind CSS, Bootstrap, Leaflet

Languages / Backend Python, Java, REST API integration

Databases PostgreSQL, MongoDB, IndexedDB

Version Control & PM Git, GitLab, GitHub, Bitbucket, Jira

CI/CD & DevOps Docker, Jenkins

Testing Jest, Jasmine, Karma

Dev Tooling & Quality Husky, Commitlint, ESLint, VS Code, Postman, Swagger, Claude Code, Antigravity, Codex, Cursor

Design & Backend Figma, Firebase

UX / Design Design Systems & shared UI component libraries, high-fidelity prototyping (Figma), interaction design, accessibility (WCAG/a11y), direct collaboration with product & design teams; UX/UI fundamentals applied on the Vipre project (~2 yrs)

Languages Spoken English — professional working proficiency (advanced reading & writing, intermediate listening & speaking)

PROFESSIONAL EXPERIENCE

Frontend Developer

2026 – Present

Jalasoft

Project: Zack — report generator and appointment scheduling application integrated with Microsoft Teams.

- Led the Angular version upgrade from v16 to v20 and the migration from NgModules to Standalone Components — my main responsibility on this project.
- Introduced Angular Signals and established the new Angular Control Flow (`@if`, `@for`, `@defer`) as the project standard, improving template readability and rendering performance.
- Integrated the frontend with REST APIs (Microsoft Graph/Teams) to automate meeting creation and retrieve post-meeting data.
- Built features to extract, process, and display post-meeting data and attendance reports.

- Refactored legacy code into generic, reusable components adaptable to multiple views.
- Used Docker to containerize and run the local development environment, ensuring consistency across the team.
- Reduced initial load time by 20% through lazy loading, `@defer` views, and the OnPush change-detection strategy; contributed to improving the development team's overall performance and delivery efficiency.
- Collaborated directly with product and design teams to translate requirements into frontend solutions, ensuring UI/UX consistency by combining Tailwind CSS, Angular Material, and Bootstrap.
- Set up Husky, Commitlint, and ESLint to improve developer experience and enforce a standardized commit history.
- Maintained and improved unit testing with Jest, ensuring the CI pipeline validated all test cases and preserved code coverage.
- Leveraged AI coding agents — Claude Code and Antigravity — to accelerate development tasks, speed up the Angular v16 to v20 migration, and automate repetitive refactoring work.

Stack: TypeScript, HTML5, SCSS (BEM), Angular (v14–v20), Angular Material, Tailwind CSS, RxJS, NgRx, Jest, Docker, Git/GitLab, MongoDB, PostgreSQL, Figma, Claude Code, Antigravity.

Frontend Developer

2021 – 2025

Jalasoft

Project: Vipre — antivirus management and service-controller web app built on a Micro-frontend architecture.

- Stayed on this project for almost four years, gaining deep architectural ownership and full product-lifecycle experience; also gained applied UX/design experience (~2 yrs) collaborating on interface and usability decisions.
- Acted as Frontend Technical Lead for a period, driving architectural decisions, delegating tasks, and ensuring the team met technical standards and deadlines.
- Mentored 3 junior developers, providing technical guidance and support.
- Conducted advanced code reviews on Bitbucket Merge Requests, validating design patterns, clean-code principles, and team guidelines.
- Introduced the new Angular Control Flow as a team-wide development standard.
- Refactored complex modules using the Smart/Dumb component pattern, creating generic, presentational components adaptable to any data type.
- Architected and maintained a shared UI component library — functioning as a lightweight design system — ensuring visual and structural consistency across multiple Micro-frontends.
- Developed an advanced search feature supporting boolean logic (AND/OR/NOT), with a custom parser translating user input into KQL (Kibana Query Language).
- Managed global state and reactive side effects using NgRx (Store, Selectors, Effects) and RxJS Observables for asynchronous data flows.
- Built a scalable SCSS architecture using BEM methodology and modern `@use` modules to avoid style conflicts.
- Used Docker to run and standardize local development and testing environments across the team.
- Monitored CI/CD builds and jobs in Jenkins, tracking pipeline status and following up on failures to keep deployments unblocked.
- Wrote and maintained unit tests with Jest, Jasmine, and Karma to ensure code stability across CI/CD deployments.

Stack: Angular, NgRx, RxJS, TypeScript, SCSS (BEM), Jest, Jasmine, Karma, Docker, Jenkins, Bitbucket, Angular Material, Figma, Jira.

Frontend Developer

2020 – 2021

Jalasoft — SES

Project: Traveler — offline-first Progressive Web App (PWA) with mapping for mobile users.

- Engineered a PWA ensuring a seamless, responsive experience across devices and under unstable network conditions.

- Implemented offline-first capabilities, persisting map data locally with IndexedDB.
- Integrated interactive, fully offline maps using Leaflet.
- Configured Service Workers to manage caching strategies for fast, reliable reloads.

Stack: Angular (v10/v12), Leaflet, IndexedDB, Figma, GitLab.

Full Stack Developer / Lead Software Developer

2017 – 2019

Jala Foundation

- Led development from conception to deployment across several SCRUM projects, covering both front-end and backend.
- Designed and developed responsive, user-friendly interfaces in Angular for event tracking and management.
- Built and maintained RESTful backend services in Python.
- Designed the relational database architecture and optimized SQL queries.
- Managed the application lifecycle, including CI/CD pipelines in GitLab.

Stack: Angular, React.js, Python, GitLab.

EDUCATION & CERTIFICATIONS

Master's Degree in Software Product Development with Artificial Intelligence Oct 2025 – Expected Jun 2027

Universidad Mayor de San Simón (UMSS), Cochabamba, Bolivia

Claude Code in Action • AI Fluency: Framework & Foundation • Introduction to Agent Skills 2026

Anthropic

Advanced React

2026

Meta, via Coursera

Postgraduate Diploma, AI & Technological Innovation in Higher Education

2025

Universidad Mayor de San Simón (UMSS)

Data Privacy & Cybersecurity Compliance (GDPR, CCPA, FERPA)

2024 – 2025

Ziff Davis / Jala University

Google UX Design Professional Certificate

2022 – 2025

Google, via Coursera — end-to-end UX process: research, empathy maps, high-fidelity prototyping and usability testing in Figma

Postgraduate Diploma, UX/UI Design for Digital Product Development

2024

Universidad del Valle (UNIVALLE), Sucre, Bolivia

Postgraduate Diploma, Enterprise Application Development

2021 – 2022

Universidad Mayor de San Simón (UMSS) — Full-stack development with Java & Angular

Bachelor of Systems Engineering

2016 – 2022

Universidad Mayor de San Simón (UMSS), Cochabamba, Bolivia

Softure 07 — Software Engineering Specialization Program

2017 – 2020

Jala Foundation — 3-year intensive program in commercial-standard software engineering practices
